ADL care

There when you can't be™

Connected monitoring of vitals, daily activities & falls

ADLcare™ patch

Independent Living *and* Peace of Mind

Aging adults want the freedom to live independently. Caregivers want to know that their clients or parents are safe and well.

Respectful Monitoring

Understanding wellness doesn't need to mean losing privacy. No cameras; no microphones. ADLcare™ only monitors the metrics needed to ensure client wellness and safety.

Intuitive Visibility

The ADLcare™ smartphone app and office dashboard provide caregivers with a clear, up-to-date view of the status of their clients or parents. Now one can quickly check on the activity and vitals of their clients at any hour of the day.

Activities Of Daily Living

ADLcare™ smartphone app

Activity is the hallmark of wellness: the better we feel, the more we do. When someone doesn't feel well or begins to lose function, their activity starts to decline. Change in activity is a powerful metric for understanding a person's well-being and their ability to care for themselves. **Activities of Daily Living (**ADLs) are the critical activities needed for self-care and are used to assess a person's level of independence. ADLcare continuously measures the basic ADLs: **walking, sitting**, **lying down, and light activity**.

What is ADLcare?

ADLcare uses a wearable patch that measures activity and vitals directly on the client. The patch measures **heart rate, respiration rate** and **temperature** and identifies the major **Activities of Daily Living**. It recognizes gait quality, such as **falling**, stumbling and cane/walker usage. Measurements are sent to caregivers for review.

www.adl-care.com

ADLcare metrics are evaluated by the ADLcare cloud-based analytics engine, which identifies changes and trends in patient metrics over time. Change metrics can be used to send reports and, in the case of urgent changes, to issue notifications directly to caregivers.

ADLcare™ dashboard

Visualizing Activity

Results are easily accessible in the ADLcare smartphone app which shows up-to-the-minute metrics for a remote client. The ADLcare dashboard is designed for viewing the metrics of dozens or hundreds of clients at a time.

Together they form a comprehensive solution designed to provide caregivers and family members with up to the minute information on their loved one's condition – without intruding on or diminishing their care and well-being.

Availability

ADLcare is available to Home Care Providers and direct to consumers now. If you would like more information contact us at *info@adl-care.com*.
